GOLD PLATING IN DUBAI

The process of gold electroplating involves applying a thin layer or coat of gold to the surface of another metal object. Gold-plated objects have a classic, luxurious appearance and are often used with metal lamps, fine decorations, and other luxury items. Gold plating is used to apply the finish by dipping the item in a gold solution as opposed to using foils colored with gold. This plating has a high level of oxidation resistance. It's a valued item because of its best visual appeal and adaptability. Corrosion resistance, heat protection, reflectivity, and wear resistance are a few of the distinctive qualities of gold plating.
